

## SAS 9.3 Output Choices

I want to...	Submit this code	Change the following in Tools-> Options-> Preferences-> Results	Results	Output location
use the default output settings	No code needed	By default, these are the settings: <b>Create LISTING:</b> deselected <b>Create HTML:</b> selected. <b>Use WORK Folder:</b> selected	Only HTML output is created and ALL output is accumulated in ONE file.	WORK
create only LISTING output	ODS _ALL_ CLOSE; ODS LISTING;	<b>Create HTML:</b> deselected <b>Create Listing :</b> selected	All output will go to the LISTING or OUTPUT Window.	WORK
create one output file per procedure	ODS HTML NEWFILE=PROC;	Cannot be done through this window.	Multiple HTML files are created – one for each procedure output. Note: Add the PATH= option to control the folder location.	The current working directory if no PATH= option to direct to WORK.
control the output destination	ODS HTML FILE = 'xxx.html'	Using an explicit ODS HTML with FILE= will close the automatic ODS HTML statement.	Output produced after the ODS statement will accumulate in the designated file until ODS HTML CLOSE is issued.	The location specified in the FILE= option or the PATH= and FILE= option.
open the HTML destination	ODS HTML;	<b>Create HTML:</b> selected <b>Use WORK Folder:</b> deselected <b>Folder:</b> None specified	HTML output is accumulated in ONE file.	The current working directory. If <b>Use WORK Folder</b> is selected in the Results window, output is placed in WORK.
close all output destinations	ODS _ALL_ CLOSE;	<b>Create LISTING:</b> deselected <b>Create HTML:</b> deselected	Log warning: <b>No output destinations active.</b>	None

Note: If you want to view the location of an output file, right-click the desired output icon in the Results window and select **Properties**.
